

Interview preparation.

Software development

Software: [programs](#) and [applications](#) that run on a [computer](#). Software programs act as the instructions that tell a computer's physical components, known as its [hardware](#), what to do.

Software Development is defined as the process of **designing, creating, testing, and maintaining computer programs and applications**. Software development plays an important role in our daily lives. It empowers smartphone apps and supports businesses worldwide.

1. Tell us about yourself:
2. Why Did You Choose a Career in Software Development?
3. What Programming Languages Are You Proficient In?
4. Can You Describe the Steps Involved in Software Development?
5. How Do You Ensure Quality and Fix Errors?
6. Why am I the perfect candidate

Questions for them:

1. What are the main objectives and expectations for interns in this role?
2. What are the primary tasks and responsibilities that interns handle on a daily basis?
3. What opportunities are there for interns to learn new skills or technologies as part of their day-to-day work?
4. How do interns typically contribute to projects or initiatives within the company?
5. What opportunities are available for professional development and growth within the company?
6. Can you provide examples of how interns are encouraged to contribute their ideas or solutions to challenges the company faces on a daily basis?
7. Are there mentorship or training programs in place for interns?
8. How do interns typically get involved in these projects, and what level of autonomy do they have?
9. Based on your experience, what advice would you give to interns starting their careers in the tech industry?
